CANCER IN CANADA IN 2022

Projected estimates of cancer in Canada in 2022 is a study published in the Canadian Medical Association Journal (CMAJ). It provides new estimates of the number and rate of new cancer cases and deaths for 22 cancer types by province, territory and sex. Below are some of the key findings from the study.

**NUMBER OF CANCER DEATHS AMONG MALES**
is 13% higher than in females

**LUNG CANCER**
incidence rate among males has declined significantly since 1984

**LUNG CANCER**
is expected to cause more deaths than breast, colorectal and pancreatic cancers combined

**CANCER DEATH RATES**
are expected to be lowest in western Canada

**IN 2022**

233,900 Canadians will be diagnosed with cancer

85,100 Canadians will die of cancer
