

Outdoor air pollution and cancer risk

Outdoor air pollution
increases lung cancer risk

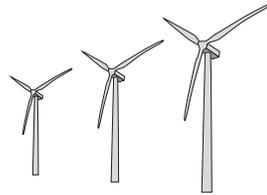

All Canadian adults
are exposed to some level of
outdoor air pollution every day*

1,700
new cancer cases
are due to outdoor air pollution

The number of new cancer cases
due to outdoor air pollution will change
from 1,700 to **1,800** in 2042

**Together, we could prevent about 3,700 cancer cases
by 2042 if Canadians were exposed to lower levels of outdoor air pollution**

*Exposure to outdoor air pollution was determined through satellite-derived data on levels of fine particulate matter present in the air (particulate matter particles less than 2.5 µm in size). See website for details on data and additional definitions.
